

Apparo Fast Edit

Architecture strategy

BI system & Apparo Fast Edit

Apparo Fast Edit is completely integrated into your BI system and is using the security of the BI system

Apparo Fast Edit is using Active Directory (Windows Domäne, Single SignOn) for authentication/ authorization

Apparo Fast Edit:

Data entry, data management,
Excel data import/export,
data quality assurance

Business Intelligence:

Reporting, **data output**,
analysis

Combining the power of both systems

Data output / reports / grafics:
Business Intelligence

Data entry:
Apparo Fast Edit

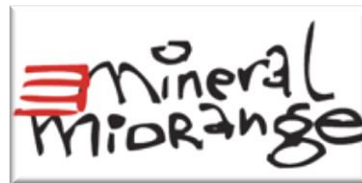

A sophisticated BI system, such as IBM Cognos or SAP BusinessObjects is unbeatable in data output.

Apparo Fast Edit is technically integrated in the BI system - the administration overhead is low and the training costs manageable (support of the BI system remains untouched)

The parallel use of a standard BI system (e.g. IBM Cognos or SAP BO) and a separate special software for data management brings extra unnecessary costs: different to operate, additional licenses

The Apparo offers, in combination with Apparo Fast Edit, OEM licenses of IBM Cognos and SAP BusinessObjects with up to - 50% discount from the standard price.
