<b>8</b>	<b><i>Disable the browser pop up blocker (see settings)</i></b>	<b>3</b>
<b>9</b>	<b><i>If you want to enter text by voice: Do not use text area widget of type rich text editor. Just use widgets of type input field or text area.</i></b>	<b>3</b>
	<b><i>Support</i></b>	<b>4</b>

- 1 The virtual keyboard needs space. Therefore it is helpful to use tablets with 10" and more screen size**

The small Ipad mini is just too small for entering text because of the keyboard space.

- 2 Make your virtual keyboard smaller: Use two fingers to pinch the keyboard inwards to make it smaller.**

- 3 Use lookup widgets without the feature of entering by keyboard: saving screen space, no keyboard necessary**
- 4 Some tablets can use hardware keyboards too. Advantage: More space left for the application**
- 5 Use Business Cases that are not displaying many data rows, making it easy for the user, increase text size and gaps**
- 6 Use text area widgets without rich text feature: making it easy for the user**
- 7 Do not use Excel export and import feature**
- 8 Disable the browser pop up blocker (see settings)**
- 9 If you want to enter text by voice: Do not use text area widget of type rich text editor. Just use widgets of type input field or text area.**
